

To whom it may concern

I hereby confirm that student Petras Vestartas has worked for CEBRA office as a trainee during the period 01.06.2011 - 01.10.2011.

Petras has participated from the preliminary design and conceptualization to final execution of design and visualization on the competition for a new masterplan for the city Høje Tåstrup, Denmark.

Høje Tåstrup is a well known city in Denmark, known for its clash between a highly modernistic and neo-rationalistic townplanning. The competition was about how to create a coherent city and a design for a new downtown area.

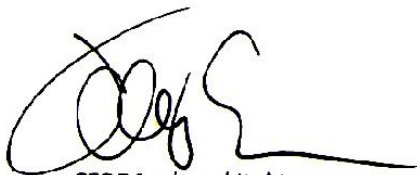

Petras contributed to the project with studies on building typologies and density and for the final execution of the project Petras worked on diagrams, 3d visualization, drawings and physical model.

Besides the masterplan project Petras has worked partly on the competition for a new church in Norway.

Petras has contributed with good analytic and programmatic skills as well as team spirit and professional curiosity. He works stubbornly and focused on his assignments. Petras has put a lot of effort into the project, and has been a vital part of the project team at CEBRA.

Do not hesitate to contact below mentioned for further opinions.

Best Regards
